EMPLOYEE ATTRITION PREDICTION USING MACHINE LEARNING

A DATA-DRIVEN APPROACH TO WORKFORCE DECISION MAKING

Prepared by: Shashank G

Skills Applied: Data Analytics | Data Visualization | Python | Machine Learning

02

INTRODUCTION TO HR ANALYTICS

HR Analytics (Human Resource Analytics), also called People Analytics, is the process of collecting, analyzing, and interpreting employee data to improve workforce related decisions. It helps organizations understand employee behavior, improve retention, increase productivity, and optimize hiring strategies.

Unlike traditional HR which depends on experience and intuition, HR analytics uses data-driven insights to support strategic decisions.

KEY COMPONENTS OF HR ANALYTICS

- **Data Collection:** Gathering employee information such as performance, salary, satisfaction, and attendance.
- **Data Analysis:** Using statistical techniques to identify patterns.
- **Data Visualization:** Presenting insights through charts and dashboards.
- **Predictive Analytics:** Using machine learning to predict employee behavior like attrition.
- **Decision Making:** Helping management take data-backed actions.

03

EVOLUTION OF HR ANALYTICS

HR analytics evolved from traditional HR management practices into a strategic business function.

TIMELINE OF HR ANALYTICS DEVELOPMENT

- **Early 1900s:** Scientific Management introduced by Frederick Taylor focused on improving productivity using measurement techniques.
- **1970–1990:** Introduction of HR Information Systems (HRIS) to digitize employee records.
- **2000–2010:** Organizations began measuring workforce metrics such as turnover rate and employee productivity.
- **2010–Present:** Growth of big data, AI, and machine learning enabled predictive HR analytics.
- **Companies like Google pioneered People Analytics to improve hiring and employee engagement strategies.**

MODERN HR ANALYTICS

Today HR analytics is used for:

- Predictive workforce planning
- Attrition reduction
- Performance optimization
- Employee engagement analysis

HR is now considered a strategic business partner rather than just an administrative department.

04

SCOPE OF HR ANALYTICS

Key Areas Where HR Analytics is Used

Recruitment Analytics: Helps organizations identify the best hiring channels and select high-quality candidates.
Example: Companies analyze hiring data to determine which recruitment platforms produce long-term employees.
Performance Analytics: Measures employee productivity and identifies skill gaps.
Example: Organizations use performance metrics to design targeted training programs.
Attrition Analytics: Predicts employees who may leave the company.
Example: Companies analyze job satisfaction, salary, and workload data to reduce turnover.
Learning and Development Analytics: Evaluates effectiveness of training programs.
Example: Comparing employee performance before and after training.
Compensation Analytics:
Ensures fair and competitive salary structures.
Example: Companies analyze compensation data to reduce pay inequality.

05

APPLICATIONS OF HR ANALYTICS

Practical Applications in Organizations

Application	Practical Implementation
Attrition Prediction	Identify employees at risk of leaving
Hiring Optimization	Select candidates with high success probability
Workforce Planning	Forecast staffing needs
Engagement Analysis	Improve employee satisfaction
Performance Tracking	Identify top and low performers

Real World Examples

IBM: Uses predictive analytics to identify employees likely to leave and takes preventive actions.

Google: Uses people analytics to improve hiring quality and team performance.

Retail Companies: Use workforce analytics to plan seasonal staffing requirements.

Key Insight

Organizations using HR analytics improve employee retention, reduce operational costs, and increase workforce efficiency.

06

BUSINESS IMPACT OF HR ANALYTICS

Strategic Benefits to Organizations

Improved Decision Making
Organizations make better workforce decisions using data instead of assumptions.

Reduced Employee Turnover
Predictive models help identify attrition risks early.

Cost Optimization
Reduces recruitment and training expenses.

Increased Productivity
Identifies performance barriers and improvement areas.

Competitive Advantage
Companies gain strategic advantage through effective workforce planning.

Business Value Generated
HR analytics transforms HR into a strategic function that directly contributes to organizational growth.

Key Takeaway
Organizations that effectively use HR analytics achieve:

- Better employee retention
- Higher productivity
- Reduced hiring costs
- Improved workforce satisfaction

07

CONNECTION TO MY MACHINE LEARNING PROJECT

Application of HR Analytics in This Project

This project applies HR analytics concepts to build a machine learning model that predicts employee attrition. The objective is to identify key factors affecting employee turnover and generate insights that help organizations improve retention strategies.

Project Objectives

- Perform exploratory data analysis on HR dataset
- Identify important features affecting attrition
- Train machine learning classification models
- Evaluate models using ROC curves
- Select best performing model
- Generate business recommendations

Tools and Technologies Used

1. Python
2. Pandas
3. NumPy
4. Matplotlib
5. Seaborn
6. Scikit-Learn

Expected Outcome

The project demonstrates how HR analytics combined with machine learning can help organizations proactively identify employee attrition risks and take preventive actions.

08

CONCLUSION

HR ANALYTICS IS TRANSFORMING WORKFORCE MANAGEMENT BY ENABLING DATA-DRIVEN DECISION MAKING. ORGANIZATIONS ARE INCREASINGLY ADOPTING ANALYTICS AND MACHINE LEARNING TO IMPROVE EMPLOYEE ENGAGEMENT, REDUCE ATTRITION, AND ENHANCE PRODUCTIVITY.

THIS PROJECT DEMONSTRATES THE PRACTICAL IMPLEMENTATION OF HR ANALYTICS CONCEPTS THROUGH EMPLOYEE ATTRITION PREDICTION, SHOWING HOW DATA SCIENCE CAN SOLVE REAL BUSINESS PROBLEMS.

HR ANALYTICS WILL CONTINUE TO PLAY A CRITICAL ROLE AS ORGANIZATIONS MOVE TOWARDS AI-DRIVEN DECISION MAKING.
